Search query:

site:SITE-URL "PROFESSION" "@gmail.com" OR "@yahoo.com" OR "@hotmail.com" OR "@outlook.com" OR "@aol.com" OR "@icloud.com" OR "@example.com" (LOCATION)

Example:

site:instagram.com "plumber" "@gmail.com" OR "@yahoo.com" OR "@hotmail.com" OR "@outlook.com" OR "@aol.com" OR "@icloud.com" (United States)

site:instagram.com "web developer" "@gmail.com" OR "@yahoo.com" OR "@hotmail.com" OR "@outlook.com" OR "@aol.com" OR "@icloud.com" (Canada)

site:linkedin.com "electrician" "@gmail.com" OR "@yahoo.com" OR "@hotmail.com" OR "@outlook.com" OR "@aol.com" OR "@icloud.com" OR "@example.com" (France)

ChatGPT Prompt:

I have a list of email addresses, and I want to extract a name based on your intelligence. The name can be a first name, last name, or company name inferred from the email. If the email address doesn't provide enough information to deduce a meaningful name, create a plausible name. Present the result in a table format with two columns: "Email Address" and "Name". Here's the format for your response:

Email Address	Name
example@email.com	Example
john.doe@gmail.com	John
sales@company.com	Company
abc123@random.com	Random

Always find or create a name, and ensure consistency in formatting. Let me know if you need the email list!
